## PROFESSIONAL SUMMARY

Flutter developer with hands-on production experience building scalable, maintainable mobile features using Clean Architecture and BLoC. During a Flutter Developer internship at ReadBuddy, refactored and shipped multiple end-to-end modules — from data layer to UI — while resolving CI/CD, dependency-injection, and Android build issues. Final-year Computer Science graduate (CGPA 3.62) actively building Nexora, an AI-powered learning accountability app, as an independent product. Comfortable owning a feature from architecture decisions through deployment.

## TECHNICAL SKILLS

**Languages:** Dart, SQL, Python

**Mobile Stack:** Flutter, BLoC/Cubit, Provider, Clean Architecture (Entity → Repository → UseCase → BLoC)

**Networking & DI:** Dio, REST APIs, Postman, GetIt

**Storage & Backend:** Firebase (Auth, Firestore, Realtime DB), Hive, SQLite, REST integration with Laravel APIs

**Tools:** Git, GitHub Actions (CI/CD), Android Studio, VS Code

## EXPERIENCE

### Flutter Mobile Developer — Intern

Mar 2026 – June 2026

*ReadBuddy (The CodersHub) · Production team app, Clean Architecture + BLoC*

- Rebuilt the HomeScreen module using Clean Architecture and BLoC, cutting the widget from ~700 to ~270 lines through structured feature decomposition — directly improving maintainability for the team.
- Reduced book-section load time by fetching trending, recommended, and latest sections in parallel with Future.wait instead of sequential calls.
- Shipped the Category listing feature end-to-end (entity → datasource → repository → use case → BLoC → UI), used as the reference pattern for later modules.
- Built the complete Profile module (avatar selection, ProfileBloc, GetIt DI) and a 3-screen Forgot Password flow (email → OTP → reset) wired into SignInBloc.
- Fixed Android release-build failures (AGP/Gradle conflicts, missing network\_security\_config.xml) and resolved recurring GitHub Actions CI/CD pipeline errors.
- Worked directly on the shared repo (not a fork); cut average PR size from 5,000+ lines across 52 files down to small, reviewable branches — improving review turnaround for the team.

## PROJECTS

### Nexora — AI-Powered Learning Accountability App

Flutter · Laravel · Gemini API · FCM

- Built the full Flutter app (Clean Architecture + BLoC) including auth, onboarding, AI-generated roadmaps, task/schedule module with FCM reminders, and a streak/badge progress-tracking system, integrating a Laravel REST backend end-to-end.

### Smart Journal — AI Journaling App

Flutter · Firebase · Provider

- Built a mood-tracking journal with voice-guided AI prompts, offline-first streak persistence, and real-time sync across Firestore and Realtime Database.

### AI Quiz Generator

Flutter · Firebase · MVVM

- Built an adaptive quiz-generation app with Provider + MVVM architecture and Firebase-backed progress tracking across multiple screen sizes.

### StackFix — Developer Issue Tracker

Flutter · Clean Architecture

- Built a bug/issue tracker with categorization, priority tagging, and status-based workflows using Clean Architecture.

### RepoGuide — GitHub Repository Learning Assistant

Flutter · REST APIs

- Integrated REST APIs to dynamically fetch and visualize repository structure for simplified onboarding.

### LingoLens — AI Language Learning App (In Progress)

Flutter · Firebase · REST APIs

- Building dynamic quiz generation and vocabulary analytics with Clean Architecture and Firebase Auth integration.

## EDUCATION

Bachelor of Science in Computer Science

Expected June 2026

## **CERTIFICATIONS**

---

Flutter Development — Google Developers (2022)

Flutter Developer Internship — TheCodersHub (March–June 2026), verified completion certificate
