PROFESSIONAL SUMMARY

Flutter developer with production internship experience building scalable mobile applications using Clean Architecture and BLoC state management. Currently shipping features at ReadBuddy, contributing across the full feature lifecycle: entity modelling, repository pattern, use cases, BLoC, and UI. Proficient in REST API integration (Dio), dependency injection (GetIt), Firebase, and team-based Git workflows with clean, scoped PRs. Final-year CS graduate with CGPA 3.63.

TECHNICAL SKILLS

Languages: Dart, Python, C++, SQL

Frameworks: Flutter, FastAPI, Flask

State Management: BLoC, Cubit, Provider

Architecture: Clean Architecture (Entity → Repository → UseCase → BLoC), MVVM, MVC

Networking: Dio, REST APIs, Postman

DI & Storage: GetIt, Firebase (Auth, Firestore, Realtime DB), Hive, SQLite

Tools: Git, GitHub Actions (CI/CD), Android Studio, VS Code, PyCharm

Other: UI/UX Design, App Deployment, Cross-platform (Android & iOS)

EXPERIENCE

Flutter Mobile Developer — Intern

Jan 2025 – Present

ReadBuddy · Team-based Production App · Clean Architecture + BLoC

- Built HomeScreen (MainTab) from scratch using Clean Architecture and BLoC; refactored widget from ~700 to ~270 lines through structured feature decomposition.
- Implemented parallel data fetching with Future.wait across three book sections (trending, recommended, latest), improving screen load efficiency.
- Developed end-to-end Category listing feature following homebooks module pattern: entity → model → datasource → repository → use case → BLoC → UI.
- Built complete Profile module including avatar selection (10 local PNG assets), ProfileBloc, PATCH /api/users/update-avatar integration, and GetIt DI registration.
- Implemented three-screen Forgot Password flow (email entry → OTP verification → password reset) fully integrated into SignInBloc.
- Built API-driven onboarding questionnaire using Cubit state management with SetOnboardingStatus as the completion source of truth.
- Resolved Android build failures (AGP mismatch, missing network_security_config.xml), fixed GetIt DI conflicts, and cleared GitHub Actions CI/CD pipeline errors.
- Maintained clean Git workflow contributing directly to the shared repo; reduced PR size from 5,000+ lines across 52 files down to focused, reviewable branches.

PROJECTS

Smart Journal App — SoftBloom

Flutter · Firebase · Provider

Personal journaling app with mood tracking, streaks, and AI-guided prompts

- Integrated Firebase Auth, Firestore, and Realtime Database for persistent and real-time data sync across sessions.
- Implemented voice recognition and chatbot-based prompt guidance; designed scalable architecture with offline-first streak persistence.

AI Quiz Generator

Flutter · Firebase · MVVM

AI-based dynamic quiz generation system with user progress tracking

- Built adaptive UI for multiple screen sizes with Provider + MVVM architecture for clean separation of concerns.
- Implemented Firebase Auth and Firestore for tracking quiz history and user progression.

Nexora — Learning Accountability App

Flutter · Laravel · GoRouter

XP/rewards system with streak tracking, badge unlocks, and auth-gated navigation

- Built full Flutter frontend with GoRouter auth gating and integrated a Laravel REST API backend.
- Designed XP progression mechanics, streak tracking, and achievement badge unlock system.

StackFix — Developer Issue Tracker

Flutter · Clean Architecture

Task and bug tracking app with full issue lifecycle management

- Built issue categorization, priority tagging, and status-based workflows with productivity-focused UI.
- Applied clean architecture principles with efficient state management throughout.

RepoGuide — GitHub Repository Learning Assistant

Flutter · REST APIs

Helps developers understand repository structure and onboarding processes

- Integrated REST APIs to dynamically fetch and visualize repository structures.
- Designed modular, maintainable codebase with structured project visualization for simplified repo exploration.

LingoLens — AI Language Learning App (In Progress)

Flutter · Firebase · REST APIs

AI-powered language learning with dynamic quizzes, vocabulary tracking, and progress analytics

- Building dynamic quiz generation and vocabulary analytics with Clean Architecture and production-ready state management.
- Integrating Firebase Auth and REST APIs; optimizing UI for engagement and scalability.

EDUCATION

Bachelor of Science in Computer Science

Expected June 2026

Baba Guru Nanak University, Nankana Sahib, Punjab · CGPA: 3.63 / 4.00

CERTIFICATIONS

- Flutter Development — Google Developers (2022)
